† = Data unavailable due to Deer Damage

All the yield data and test weights are reported at the 13.5% grain moisture content

Entries in bold are not significantly different than the highest yielding line (LSD, p=0.05)

Yield rankings are based on averaged means of 15 entries from five different locations

1 Plant height was recorded at all locations just before hearvesting

2 Heading date and flowering time data is based on the average of three locations (Wye, Clarksville and Beltsville, MD)

Entries in bold are not significantly different than the highest yielding line (LSD, p=0.05)

Notes:

- 1- FHB index and DON content are from artificially inoculated misted nursery, so the values may be high as compared to farmers' fields
- 2- Data for other diseases was recorded from three locations (Wye, Clarksville and Beltsville, MD) under natural inoculation
- 3- Disease scores were recorded on 0-9 scale based on visual ratings, '0' = no disease or low severity and '9' = high disease severity

**This work was supported by US Wheat and Barley Scab Initiative, MD Grain Producers Utilization Board, and Maryland Crop Improvement Association**
